

The HomeworkAssignment class*

1 Abstract

This class provides a relative simple document-type for homework, mainly created for assignments at the University. This class is inherited from `article`, it is not perfect, but I am trying my very best.

2 Options

<code>problemstyle=<1></code>	These options allow the customization of the displayed numbers. For Example, if
<code>subproblemstyle=<1></code>	<code>problemstyle=Roman</code> , <code>subproblemstyle=arabic</code> , <code>subsubproblemstyle=roman</code>
<code>subsubproblemstyle=<1></code>	is passed, The first subsubproblem of the first subproblem of the first problem would be labeled as i) of Problem I.1 .
	Available options are <code>arabic</code> , <code>Alph</code> , <code>alph</code> , <code>Roman</code> , and <code>roman</code> . Standard values are: <code>problemstyle=arabic</code> , <code>subproblemstyle=alph</code> , <code>subsubproblemstyle=roman</code> .
<code>design=<1></code>	Allows the User to select an older page-style, for backwards compatibility. Recognized values are <code>v1</code> and <code>v2</code> . Everytime a version changes the default look, a new possible value will be added.
	Only set this if you really need to get an old look, <i>older styles are not going to be maintained!</i>

2.1 Inherited options

Because the class is inherited by `article`, every Option that can be passed to `article`, will be passed to `article`.

3 Commands

3.1 Document Informations

<code>\subject</code>	Sets the subject of the document. Takes the subject as argument. Standard Value
<code>\kurs</code>	<hr/> *This document corresponds to HomeworkAssignment v2.0,dated 2017/05/13.

is “Kein Kurs”
`\kurs` is deprecated.

`\tutorial` Sets the tutorial of the author. Takes it as an argument. Standard Value is empty, so that this command can be omitted.
`\tutorium` is deprecated.

`\deadline` Sets the deadline of the document. Takes it as an argument. Standard value is `\today`.
`\abgabe` is deprecated

3.1.1 Inherited from article

`\author` Sets the author of the document.
`\date` Sets the date of the document.

3.2 Sectioning

Because the class is designed for Assignments, the sectioning-commands are different from Article

3.2.1 ‘plain’ Sectioning

`\problem` These commands work like their counterpart in article, except that there will be no number, nor will they increase a counter. Nevertheless, they will be shown in the table of contents.
`\subproblem`
`\subsubproblem`

`\solution` They work like Paragraph, but do not take an argument, instead they print out “Lösung”, “Beweis”, “Gegeben”, and “Zu zeigen”, respectively¹. They are not mentioned in the table of contents.
`\proof`
`\given`
`\toShow`

3.2.2 ‘better’ Sectioning

The following commands are an augmented version of the “plain” commands.

`\newproblem` These commands require no argument, and automatically create a numbered title. The optional Argument is the new value for the corresponding counter.
`\newsproblem`
`\newsproblem`
`\newsproblem`

3.3 Useful Macros

3.3.1 Quod Erat Demunstarndum, End of Proof

`\QED` Display a flushed-right *QED*, □, or ■, respectively. `\qed` is not implemented, to keep compatibility to several Math-packages, which define the later.
`\EOP`

`\eop` ¹As of v1.6, Translations are added, depending on the chosen Language, there may be an other Text displayed.
See 8.2 for all Translations

3.3.2 Quod Non Erat Demunstarndum at iucundum est

`\QNEd` Display a flushed-right \triangle . `\QNEd` displays it in a new line, `\qned` at the end of the same line.
In Mathematical proofs this symbol is used to mark things, which we did not intend to proof, but are interesting anyway.

3.4 Stolen Goods

»Das ist alles nur geklaut«

~Tobias Künzel

These Commands are not mine, they are all stolen from Alexander Bartolomey's² `amath-Class`³

<code>\N</code>	⁴⁵ Defines a set of mathematical fields, which are very usefull (see Table 1)
<code>\Z</code>	
<code>\R</code>	Command Output Description

<code>\Primes</code>	<code>\R</code> \mathbb{R} Real Numbers
	<code>\C</code> \mathbb{C} Complex Numbers
	<code>\F</code> \mathbb{F} Prime-Field?
	<code>\Primes</code> \mathbb{P} Set of all Primes

Table 1: Field-Commands

³`Amath.sty` is part of Alexander Bartolomey's Alphabet Classes: <https://github.com/occloxiium/AlphabetClasses>

⁴Has to be \mathbb{P} , because \mathbb{P} is already in use

⁵not a Field

<code>\dx</code>	dx
<code>\excup</code>	$\dot{\cup}$
<code>\dim[<1>]</code>	$\dim_{<1>}$
<code>\diff{<1>}</code>	$\frac{d}{d_{<1>}}$

Table 2: Text-like Functions

`\falls` prints out $\ggfalls\ll$ ⁶

4 Pagestyle

4.1 Headers

⁶In German, actual Translation may differ

8 Implementation

The following part is very boring, but I have not found a solution to create a .cls-file without including the implementation into the document. Loads L^AT_EX₂_ε and sets the Version Loads the `article`, which is the base-class.

8.4 Internal commands

8.4.1 Counter-Commands

Counter--Commands These are used to output the Exercise numbers in the desired style

```

144 \newcommand{\hwa@problemno}{\arabic{problem}}
145 \newcommand{\hwa@subproblemno}{\alph{subproblem}}
146 \newcommand{\hwa@subsubproblemno}{\roman{subsubproblem}}

```

8.4.2 Counter-Style Parser

Counter--Style Parser This takes a style-input (#1), one of the three previous defined commands (#2) and the corresponding counter (#3) to redefine #1, so that it corresponds to #2. See 8.4.3 for example usement.

```

147 \newcommand{\hwa@parseCounterStyle}[3]{

156                 arabic, Arabic, roman or Roman.} } } } } }

```

8.4.3 Counter-Commands II

ounter--Style ParserCommands II Redefines the three counter-commands

```
