

# The CheatSheet class<sup>1</sup>

Adrian C. Hinrichs

adrian.hinrichs@rwth-aachen.de

July 29, 2017

## Abstract

This Class provides a clean, multicolumn look designed for Cheat Sheets

## Options

### Inherited options

Because the class is inherited by article, every Option that can be passed to article, will be passed to article.

## Own options

Currently, there are no own options.

## Commands

## Useful Macros

## Development and support

The class is developed at *GitHub*:

<https://github.com/ACHinrichs/LaTeX-templates>

Please refer to that site for any bug report or development information.

## Changelog

**v0.2 - 2017/07/06** Initial

**v0.4 - 2017/07/29** Enclose document with multicols (technically, it is the other way around)

**Note:** The minor version of stable versions is always even, the minor version of unstable versions is always odd. There are no unstable patch-versions, instead unstable versions get an alphabetical suffix.

## Examples

For examples, please see the Git-Repo at

<https://github.com/ACHinrichs/LaTeX-templates> or my CheatSheets at

<https://github.com/ACHinrichs/CheatSheets>
