The HomeworkAssignment class*

1 Abstract

This class provides a relative simple docuemnt—type for homework, mainly created for assignments at the University This class is inherited from article, it is not perfect, but I am trying my verry best.

2 Options

problemstyle=<1>
subproblemstyle=<1>
subsubproblemstyle=<1>

These options allow the customizatuion of the displayed numbers. For Example, if problemstyle=Roman, subproblemstyle=arabic, subsubproblemstyle=roman is passed, The first subsubproblem of the first subproblem of the first problem would be labled as i) of **Problem I.1**.

Available options are arabic, Alph, alph, Roman, and roman. Standard values are: problemstyle=arabic, subproblemstyle=alph, subsubproblemstyle=roman.

2.1 Inherited options

Because the class is inherited by Abstract, every Option that can be passed to article, will be passed to article.

2.2 Lateral 2.2 La

Because the Options are handled via kvoptions and passed directly to article, LATEXraises this warning. IMHO, the Options are used and this warning can be ignored. Nevertheless I am working on it.

3 Commands

3.1 Document Informations

\subject \kurs

Sets the subject of the document. Takes the subject as argument. Standard Value

^{*}This document corresponds to HomeworkAssignment v1.5.2,dated 2017 $\04\30$.

is "Kein Kurs" \kurs is deprecated.

\tutorial \tutorium

Sets the tutorial of the author. Takes it as an argument. Stamdard Value is empty, so that this command can be omitted.

\tutorium is deprecated.

\deadline \abgabe Sets the deadline of the document. Takes it as an argument. Standard value is **\today**.

\abgabe is deprecated

3.1.1 Inherited from article

\author

Sets the author of the document.

\date Sets the date of the document.

3.2 Sectioning

Because the class is designed for Assignments, the sectioning-commands are different from Article

3.2.1 'plain' Sectioning

\problem \subproblem \subsubproblem

These commands work like theyr counterpart in article, except that there will be no number, nor will they increase a counter. Nevertheless, hey will be shown in the table of contents.

\solution \proof

They work like Paragraph, but do not take an argument, instead they print out "Lösung" and "Beweis" respective. They are not mentioned in the table of contents.

3.2.2 'better' Sectioning

\newproblem \newsubproblem newsubsubproblem The following commands are an augmented version of the "plain" commands.

These commands require no argument, and automatically create a numbered title. The optional Argument is the new value for the coresponding counter.

5 Development and support

The package is developed at github:

7 Implementation

The following part is verry boring, but I have not found a solution to create a .cls-file without including the implementation into the document. Loads LATEX2e and sets the Version Loads the article, which is the base-class.

```
1 \RequirePackage{kvoptions}
2 \SetupKeyvalOptions{ family=hwa,
   prefix=hwa@ }
4 \DeclareStringOption[arabic]{problemsty}
5 \DeclareStringOption[alph]{subproblemsty}
6 \DeclareStringOption[roman] {subsubproblemsty}

7.1 Internal commands

7.1.1 Counter-Commands

Counter--Commands

These are used to output the Exercise numbers in the desired style

- 50 \newcommand{\hwa@problemno}{\arabic{problem}}
- $51 \mbox{ }\mbox{newcommand{\hwa@subproblemno}{\alph{subproblem}}}$
- $52 \newcommand{\hwa@subsubproblemno}{\noman{subsubproblem}}$

7.1.2 Counter-Style Parser

Counter--Style Parser

This takes a style-input (#1), one of the three previous defined commands (#2) and the coresponding counter (#3) to redefine #1, so that it corresponds to #2. See 7.1.3 for example usement.

```
53 \newcommand{\hwa@parseCounterStyle}[3]{
   \left\{ \frac{\#1}{\arabic} \right\} 
     \left\{ \frac{\#1}{roman} \right\} \
55
       \left\{ \frac{\#1}{alph} \right\} 
56
         \ifthenelse{\equal{#1}{Alph}}{ \renewcommand{#2}{\Alph{#3}} }{
57
          \ifthenelse{\equal{#1}{Roman}}{

            \renewcommand{#2}{\Roman{#3}} }{

              option Counter-Styling}{Possible Values are alph,
61
              arabic, Arabic, roman or Roman.} } } } } }
```

7.1.3 Counter-Commands II

ounter--Style ParserCommands II Redefines the three counter-commands

- 63 \hwa@parseCounterStyle{\hwa@problemsty}{\hwa@problemno}{problem}
- $64 \hwa@parseCounterStyle{\hwa@subproblemsty}{\hwa@subproblemno}{subproblem}$
- $65 \hwa@parseCounterStyle{\hwa@subsubproblemsty}{\hwa@subsubproblemno}{subsubproblem}{} \\$
